

**Every surface in our facility has been disinfected with an EPA approved disinfectant for SARS-CoV-2-Covid 19 and have had Vytis Shield Surface Barrier Coatings applied to them. This includes all Public, Office, and Gym Areas (including the foam pits).**

**PROTECT – PREVENT – PREVAIL**

### **Update as of October 14, 2020**

Rebounders is dedicated to the safety of their students, staff and visitors. Upon reopening, we took extraordinary measures to keep everyone safe, which included around the clock cleaning and disinfecting measures. Knowing that these measures long term would not meet our high standards, we proceeded to bring in an infection prevention company whose mission, in the healthcare industry for the past 7 years, is to protect surfaces with a 99.13% effectiveness that lasts for 12months.

Vytis Shield took pre-treatment tests which showed that our cleaning efforts were effective as our bioburden levels were very low. However, as you can see from the results below, the barrier coatings Vytis Shield applied eliminated 90% of the remaining bioburden that was found on our surfaces. Vytis Shields technology will continue to work on all our surfaces without requiring our staff to continue our stringent cleaning protocols. This will lead to a healthier and safer facility for all to enjoy.

In these uncertain times, you can be confident that we at Rebounders will continue to put the health of all that visit our facility first.

### **Changes to our COVID Guidelines as of October 14, 2020:**

**\*Yoga mats/beach towel will now be optional for all students**

**\*We will now sanitize all equipment used every hour. (This is still more than the CDC recommendation for every 2 hours for high touch areas)**

We will have the gym tested quarterly to make sure that the bioburden levels remain in the very low range.
